

Travis Dealer Back Office – Menu dropdown issues with Internet Explorer 11

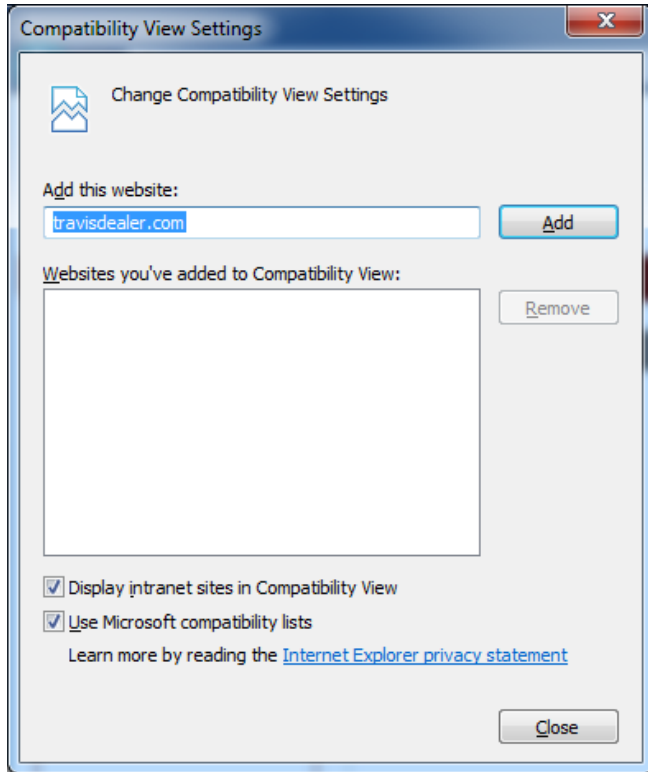

With the new version of Microsoft Internet Explorer 11, the Travis Dealer Back Office menu has an issue where the dropdown menu is up in the header of the page. See image below...

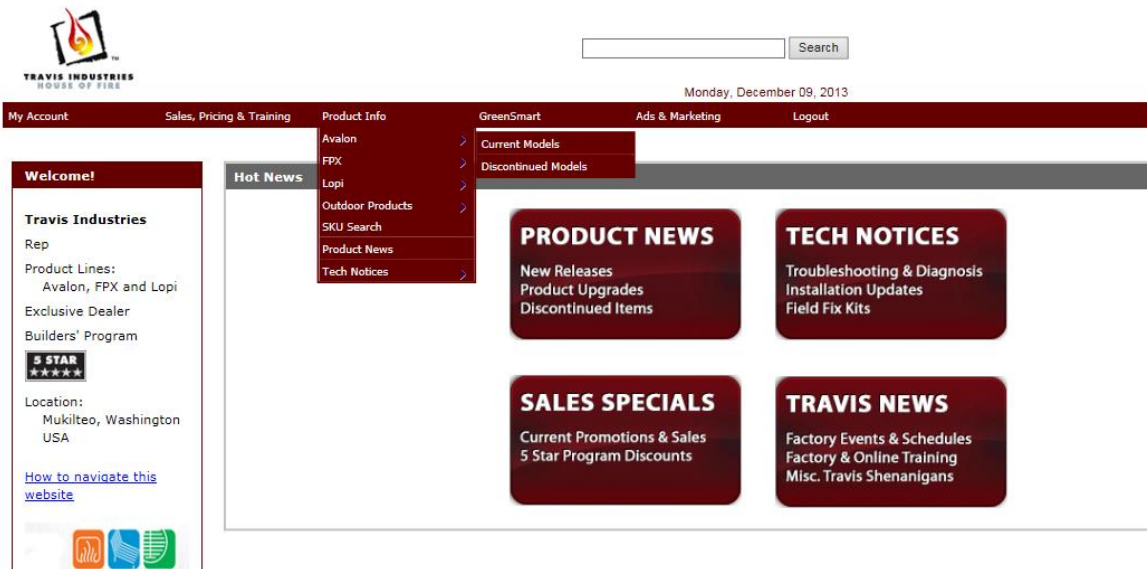

To fix this issue click on the gear icon on the Internet Explorer window (*top right corner*). From the dropdown select **“Compatibility View Settings”**.

Next the window Compatibility View Settings will pop-up with travisdealer.com in the “Add this website:” click “Add” button and leave the default check boxes and click the “Close” button.

You will need to log back into the Dealer Back Office and the menu issue will be corrected.

Thank you,

Travis Industries - Information Service Department
